Abstract

The electronic game known as video game, interactive game is referring to all on running on the platform of electronic equipment. According to media of different points into five kinds: computer games, the host of the game (or console games, TV games), handheld games, arcade games and mobile games (mainly mobile phone games). Electronic game perfect appeared at the end of twentieth Century, the game has changed the human behavior and the definition of the word game, is a born with the development of science and technology and cultural activities.

Introduction

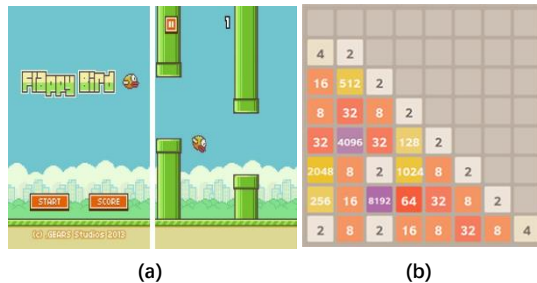

Odyssey is the world's first home game, which was born in 1972. To the world the first game machine making game company is Atari. This also gave birth to the world the first home video games – "Tennis for two". Fleeting, today is the 44 anniversary of the birth of the game came on. But who would have thought, the small game, but in today's achievements of the large industry \$65 billion. Console is the most common game platform. Atari 2600 is recognized as the first most successful commercial specifically for game design platform, it identifies the: a host and controller separation, replacement of the game shows the cassette. The Nintendo FC is the continuation of this architecture. Early Atari 2600 picture is quite simple, the

host memory only 4K, and such platform development history so far, the computational efficiency has far more than the original, toward a more realistic picture of the development. And on the Xbox 360 and PS3 the is no longer simple game console, but hopes to become every family living room multimedia entertainment center, including games, video, pictures, music, Internet, etc. Now, there are three famous Console companies are SONY, Nintendo and Microsoft. SONY' S newest console is called PS4, Nintendo' s newest console is called WIU and the Microsoft' s newest console is called Xbox One. Both of them have strong processing performance.

Computer games are also very popular. Based on the powerful function of the Internet, the computer can be very convenient to play games with friends. There is a very famous online game on computer called "World of Warcraft(WOW)" . "World of Warcraft" is produced by the famous game company Blizzard Entertainment game of the first network, which belongs to the massively multiplayer online role-playing game. RTS game with the company produced the "Warcraft" plot for the historical background, relying on the world of Warcraft historical events and heroes, world of Warcraft has a complete history time line. Game player in the world of Warcraft adventures, to complete the task, the new adventures, explore the unknown world and conquer monster etc. This game has greatly promoted the development of the computer game.

Now, a new game type appeared, it is called mobile game. With the popularity and the development of mobile phone, Everyone is the pursuit of a more convenient gaming

experience; this is why the mobile game becomes so popular. People can play the game everywhere, such as the park, the bus, the subway, even in the WC. And the mobile game sometimes is more attractive than computer game. The mobile game is more easy to use, but also more attractive to female game player. Mobile games are not like computer games; computer games usually take a long time to get started. But the mobile games are attractive to the game through the simple interface and easy to understand the rules of the game. The picture is usually very simple, so this is the reason why they attract female game player. There are some examples about the mobile games, according to these picture, you can investigate the characteristics of the mobile game better.

Picture (a): This game is called flappy bird. "Flappy bird" is a developed by the Vietnamese independent game developer Dong Nguyen's works, the game on the line in May 24, 2013, and in February 2014 the sudden red. In February 2014, the "Flappy Bird" is the developer from apple and Google app store removed. In 2014 August the official return of APP STORE, many people joined the Flappy fans long-awaited battle mode. Game player must control a bird game, leap from a variety of different length pipes consisting of obstacles. The only operate to play the game is regularly to click the mobile phone screen to make the bird keep balance. You will find that the interface and operation of the game is easier than those computer games, but it becomes very popular these days.

Picture(b): This game is called "2048" , This is the 20-year-old Corelli Gabriele developed a digital game. The original is a fun, in the open source version on GitHub after the accident popular. This game is easy to play, each can choose the upper and lower sliding around, once per slide, all digital box will move closer to the direction of sliding, the system will be in place of blank random number a digital box, the box has the same number in closer, at the time of the collision will phase. The superposition finally

pieced together the number 2048 even if successful. So, you see, the game player just slides, slides, the game can continue, you can easily get started, isn't it?

Conclusion

Playing is a human nature, electronic game is fun, no one can stop the development of, because the human will not stop the pace of progress. We can do is look at it, the health to regulate it, manage it.

Finally, I want to advocate a healthy and play games, play games for health, only in this way can our society become more harmonious, our world will become more beautiful!
