

What is a Video Game

Video Games, refers to all relying on the electronic device platforms and operating interactive games. According to multi-divided into five different media: pc games, console games (also known as console games, video games), handheld games, arcade games and mobile games (mainly mobile games). Perfect video game appeared in the late 20th century, mankind has changed the game behavior and definition of the term of the game, it is a science and technology development with the birth of cultural activities. Video games are also available to refer to the "electronic game software."

Our first exposure to video games are basically regarded arcade game, when the PC is not yet universal, small partners are used together to play arcade games. 1983 "Mario Bros" was born, and this game has become our most obsessed childhood arcade game. There are crazy people together KOF. Every day discussion with the mutual struggle between the students, it can be said that these games to accompany our childhood.

Widespread use of computers in the 21st century, we came into contact with online games, it is probably the primary school age. This process continues until now, we still mainly entertainment through online games. Unlike some online games arcade games so expensive, free to be very powerful, which will undoubtedly attract the less well-off in our economy.. We contacted the first game of "BNB", "Adventure Island", "Fantasy Westward Journey", etc, sometimes a classmate got powerful equipment in the game, will let other people envy for a long time, even though we now already I do not play these games, but these experiences remain unforgettable.

For mobile phones and video games, the time should contact us again after 2010, and after all this time China began to smart phones and the popularity of computers, video games feel real memorable, convenient mobile games, ready to play. Enrich our lives.

The future of video games, the category distinction between them has become increasingly blurred. Nevertheless, the main theme of the game development is development of the Internet, video games look to the

future to give us more surprises.
