Abstract:

Video game (video game) is also called electronic games, electronic games (game player) refers to the user interaction and video equipment. Traditional video games generally refers to the display device. However, with the development of video games, now video games have been defined for all types of display devices.

1.introduction:

Video game is refers to all interactive games in the electronic media on operation platform. Electronic games carrier is divided according to the game can be divided into the arcade games, handheld games, video games (or console games, video games and is part of the region, said the video game), computer games and mobile games (also called mobile games, mobile games, is refers to the people through the electronic equipment such as computers, game consoles and mobile phones for the game. Western gaming industry is often divided into video game video game (game Video) and game Audio (audio games), and the Chinese game industry is accustomed to all the "electronic game" refers to the.

Electronic system for running the game is often referred to as a gaming platform. If we used the computer and some other game platforms (Sony PSP, Nintendo DS, Nintendo Wii, Xbox, etc.). These include large host computer game platform, small handheld game consoles and arcade game platform is

one of the special.

The input device used to operate the video game known as a game controller (handle keyboard, etc.). Input devices used to process video games are called game controllers, and across platforms are not the same. A dedicated host controller can contain only one button and a joystick. Of course there may be more functional buttons and or more joystick. Early PC games often require a game keyboard. While many computer games or game player requires the use of keyboard and mouse to operate at the same time.

Video games are also used and other forms of interaction to enhance the game player experience. Audio is almost universal, such as speakers and headset. May also be through a haptic device, such as vibration etc..

2.different kinds of video games
