What is a video game

Abstract

Video games: the network + video, common have Internet, computer was mounted on the camera can be video, side of the game. Really face to face communication. Video game system is the need to use the TV as the display terminal of the game system. Its core actually is a kind of highly customizable computer, basically all the video game systems are using a desktop computer (PC) based on CPU, it and computer are very different.

Introduction

Game Video (video game) is also called electronic games, electronic games is the user (player) and video equipment interaction. Traditional video games are generally referred to as raster display devices. However, with the development of video games, now video games have been defined for all types of display devices.
Refers to all the interactive games that run on the electronic media platform. Electronic games carrier is divided according to the game can be divided into the arcade games, handheld games, video games (or console games, video games and is part of the region, said the video game), computer games and mobile games (also called mobile games, mobile games, is refers to the people through the electronic equipment such as computers, game consoles and mobile phones for the game. Western gaming industry is often divided into video game video game (game Video) and game Audio (audio games), and the Chinese game industry is accustomed to all the "electronic game" refers to the.

Overview

How do we want to make video games. First of all, we should clear to the making of the game category. The design of corresponding code files according to their games then this for me now, or a certain degree of difficulty. Of course, you should also think this game is 3D or 2D, now generally is 3D.At the same time, you have to make a good game engine, which requires you to have a good encoding ability.Right, you have to choose the background music for this game, the voice of the characters speak, that is, the production of audio.After the above things are done, you have to test the game.

Summary

Video game production is a very complicated process, it there are many factors to consider. The game can't too difficult, the most important thing is to understand the market game, and then do a suitable for the public's game, to be myself by playing a fist company (LOL) very interesting game. In big games and now there is no experience, oneself also only produced before gobang such a simple game. So, it will

take more time to study.
